Highlights:

Top ~0.5% on <u>StackOverflow</u> this month (06/16).
Top ~5% on <u>HackerRank</u> algorithms between November and March.
Open source contributor with a number of quality pull requests on <u>GitHub</u>.
Outstanding proficiency in JavaScript with a number of published <u>npm</u> packages.
Fluent in English and Portuguese. Limited working proficiency in Spanish.

Experience:

position: Fullstack Engineer

openhour:
date: April 2014 — Present
description: Working hard to fulfill the company's mission of saving people time. Primarily as a software engineer, touching both frontend and backend, and often wearing complementary hats as needed (i.e. mentor, devops, project manager, UI/UX).
frontend: Vanilla, React (reflux), jQuery, Knockout, BlueBird, File, Blob
backend: PHP, Zend Framework 2, Laravel, Node.js, Express, MongoDB, Redis, S3
sever: Apache, NGINX, Azure, AWS – EC2/Route 53/CloudFront
reference: *"Marcelino and I were two of four engineers at Openhour together. His extraordinary empathy and honesty drive him to get to the heart of all stakeholder intentions and to drive things forward from first principles. He sincerely cares about how what he does affects people within a company and without. Like any great engineer, once he understands what an organization's needs are he knows what questions need to be asked, can draw up a plan, finds the seams, and separates out the parts that need research and input from the parts that can be executed on now."* - Thomas Wrenn (Fullstack Engineer at Nava PBC)

Startup Experiment:

date: April 2014 — April 2015

description: Worked on an isomorphic (JavaScript based) Mobile and Web development system with the intention of facilitating the build and maintenance process of modern, large scale applications. It has been put on hold (with no plans for continuation) as the investment round, that would cushion the development of the stable version, fell through.

frontend: Vanilla, jQuery, Ace, JsonML, Intercom, LZString, IndexDB, MO, File

backend: Node.js, Express, DynamoDB, S3

server: NGINX, AWS — EC2/Route 53/CloudFront/Load-Balance/Auto-Scale

reference: *"I've known this guy for a long time. Smart, authentic, and forward-looking is just a few of the qualities that Marcelino has preserved through out the years. I observed him closely as he attempted to make the impossible happen, and although it didn't work out, I have little doubt in my mind that he'll be a key figure in this industry in the very near future. I look forward to advising Marcelino on the next opportunity and help him in bringing more joy to the world."* - Marcelo Martins (CoFounder at Connexion)

Freelancer:

date: April 2013 — April 2014

description: Worked on a variety of web and mobile application projects with clients from a wide range of industries. Most notably, an online radio station called ConnectedRadio, and a gap analysis tool for Agilex Fragrances (www.agilexfragrances.com), a wholesale supplier of fragrances for high-end clients like Victoria Secret.

frontend: Vanilla, jQuery, Custom Framework

backend: PHP, CodeIgniter, Laravel, S3, MySQL

server: Apache, NGINX, AWS — EC2/Route 53/CloudFront/Load-Balance/Auto-Scale

reference: *"Marcelino is one of the most talented and resourceful people I have had the pleasure of meeting. Not only did he single-handedly build and scale our entire infrastructure to help us deal with terabytes worth of (100mb+) audio files, but also served as an informal business adviser in our times of need. I would not at all mind having access to his vast expertise in the future :) Big thank you from everyone at ConnectedRadio.net!"* - Gui Ramos (Operations Manager at DTour)

openhour (formerly CreativeWorx):

date: April 2012 — April 2013

description: Worked on numerous internal management and collaboration tools geared towards advertisement agencies, as well as the analytics and administrator panels for their only public product, TimeTracker. Only full-time hire out of a 12 person internship.

frontend: Vanilla, jQuery, Bootstrap, Highcharts

backend: PHP, Zend Framework 2, MongoDB

server: Apache, NGINX, AWS — EC2/Route 53/CloudFront/Load-Balance/Auto-Scale

reference: *"From my first meeting with Marcelino, it was clear that he has "it"...and you know it when you see it. He impressed me from the start with his initiative, his ability to think outside the box, and...perhaps most importantly...his proven ability to deliver. He consistently beat deadlines and usually delivered more than expected. I look forward to working with Marcelino again!"* - Mark Hirsch (CEO at Openhour)
